

mesa2 - two-hand measurement sheet

100.0 mm - print at 100%, no scaling, LANDSCAPE

Both hands, ONE sitting, paper taped down and not moved. No desk-edge datum: the angle between your two hands IS the unibody angle.

Ink the fingertip pads, or lay carbon paper face-down over this sheet and just press. Do NOT hold a pen - it changes the posture.

Rest, TAP each finger straight down; curl one row further, tap again. Two dots per finger - the line through them is that column's angle.

Thumbs: sweep the comfortable arc and tap 4-5 times along it, an arc rather than two aimed dots. Then mark both palm heels.

origin (0,0) at the red cross - X runs right, Y runs toward you. Label every dot: hand, finger, and which of the two taps.
