

mesa2 - two-hand measurement sheet

100.0 mm - print at 100%, no scaling, LANDSCAPE

Both hands down as you would type, paper taped and NOT moved for the whole session. No desk-edge datum is needed: the angle between your two hands IS the unibody angle, so it is internal to this sheet as long as the paper never moves.

Steno rest position: each finger sits BETWEEN its two keys, not on one of them. Mark three dots per finger - (a) where it rests, (b) rocked forward, (c) rocked back. (a) is the column centre and (b)-(c) give the column ANGLE.

Do not try to set the row pitch from (b) and (c): it is fixed at 17 mm by the caps. Only note if the rock feels SHORT.

Keep the hand PLANTED and lift one finger at a time; the others hold the posture. Mark with a pen in the other hand.

Thumbs: sweep the comfortable arc and mark 4-5 spots along it - an arc, not two aimed dots. Then mark both palm heels.

Do the left hand this way, then re-place BOTH hands naturally and do the right. Re-placing both is what keeps the angle honest.

origin (0,0) at the red cross - X runs right, Y runs toward you. Label every dot: hand, finger, and which of rest / forward / back.
